- Edit video playlists
- Record video to local drive
- Manipulate pan, tilt and zoom (PTZ) capable cameras
- Capture video as a single picture
- Replay a collection of video grouped as exercises
- Remotely controlled video client

Benefits

SIGHT is a simple to use, low cost video capture solution designed to meet live training community requirements. SIGHT operates in either a stand-alone mode, or tightly integrated with LT2 applications through the LT2 video SOA (Service-oriented Architecture). SIGHT supports the Information Assurance (IA) accreditation process. Its simple interface and configuration makes the application suitable for a small, low-budget fielding, with scalability to larger deployments.
